

# M.E.M.E

(MODIFICATION OF ENVIRONEMENT FOR MULTIVERSE EXPERIENCES)

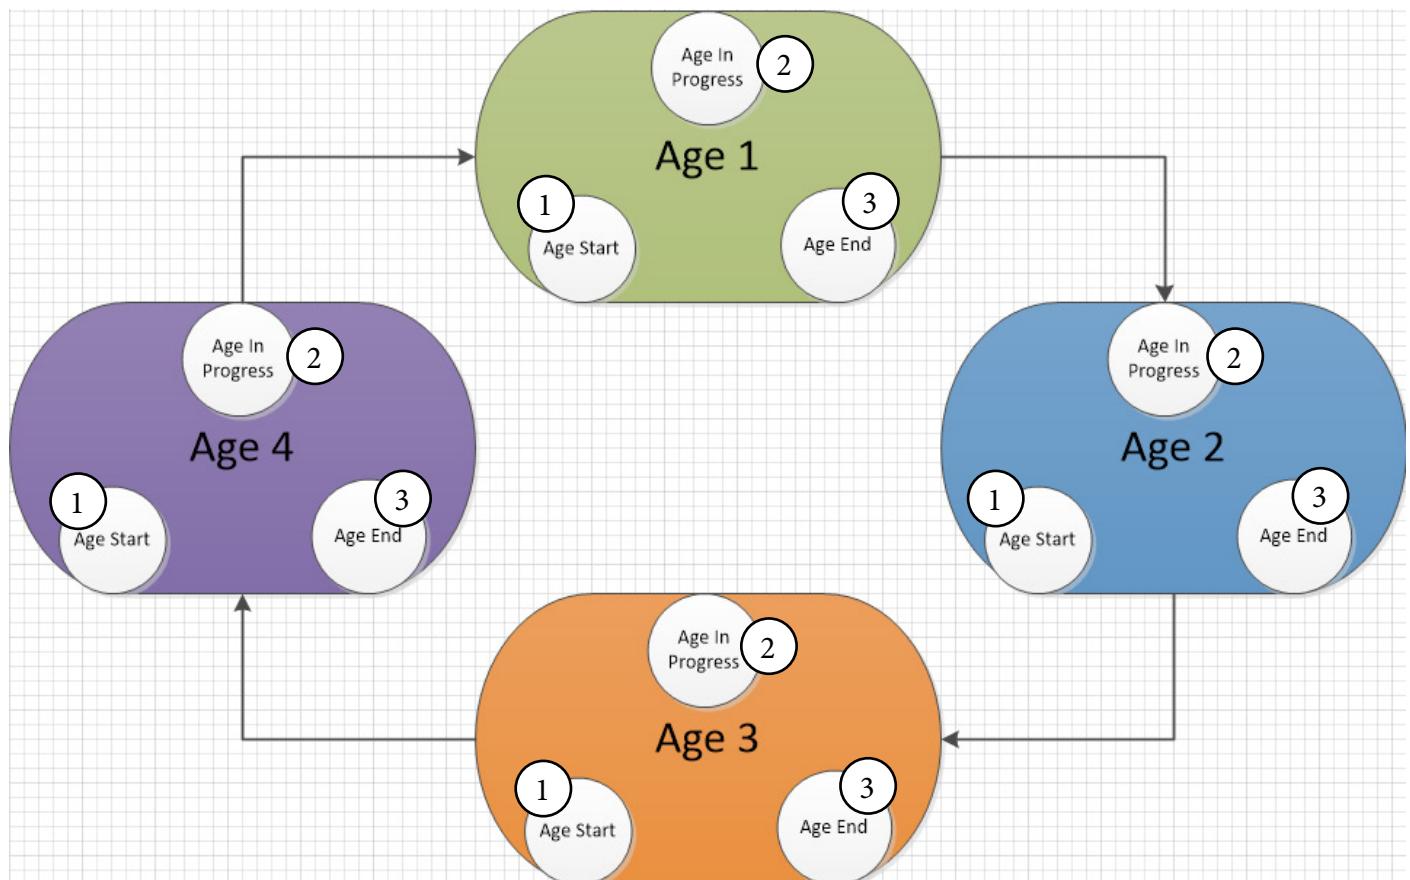

# OVERALL FUNCTIONING OF THE M.E.M.E

It is an infinite loop divided into 4 segments, 1 per age.

- 1 Age start and assets spawn
- 2 Age timer
- 3 End of the age then move to the next age and trigger the kill of the assets present.

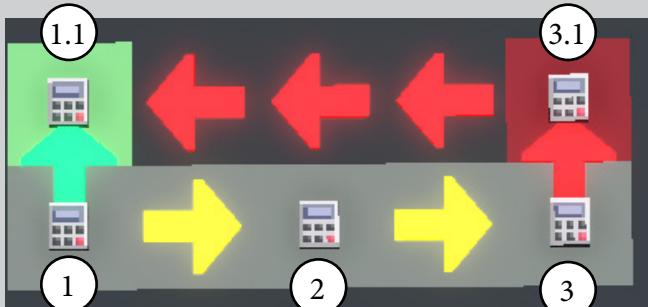

# DETAILED FUNCTIONING OF THE LOOP

Loop activator.

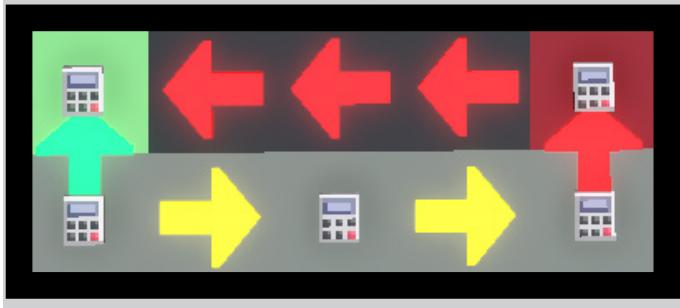

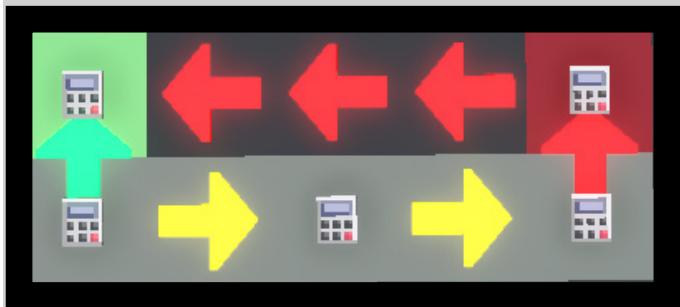

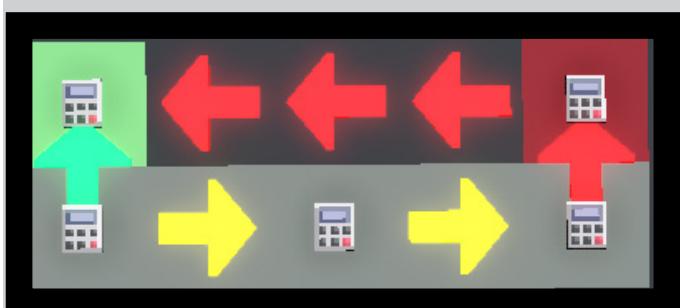

The asset sends the «Age1Start» message once at launch to start the loop.

## Age Loop.

(To be repeated as many times as the desired age)

- 1 Launch of the age and spawn of the assets
- 1.1 Asset spawner
- 2 Age timer
- 3 End of the age then move to the next age and trigger the kill of the assets present.
- 3.1 Broadcaster that kill the assets of the age.

Next ages loop

A

«Death Event» = death mode of the asset.  
In our case «Reset» allows the asset to respawn right after being destroyed.

B

«Death Delay» = The time it will take for the asset to die.  
In our case «-2» this allows the asset to destroy itself instantly.

*NB: the duration of the death animation is 0.525s*

C

«Instant Death Message» = Message that allows the asset to die without receiving attack damage.  
In our case «Age1Start».

D

«Life Bar Display» = Is the life bar of the asset displayed when it takes damage/strike.  
In our case «Hidden» This allows not to pollute the player's UI.

E

«Message Sent On Death» = Message sent when the asset dies (Depends on the «Death Delay» parameter).  
In our case «Age1InProgress» this message will trigger the death of the next asset.

F

«Sent To Tag» = Target tag of the «Message Sent On Death» parameter.  
In our case «Age1» the message «Age1InProgress» will be received by all assets with the tag «Age1».

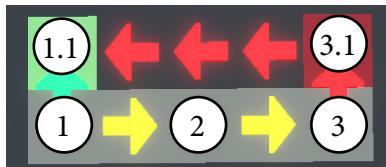

G

«Tags» = Tag of the asset.  
In our case «Age1» the asset will listen to all messages sent with target «Age1» or «All».

A

«Use Preset» = The spawner uses a preset.  
In our case «True» it allows to spawner groups of assets  
and therefore to gain performance.

B

«Preset» = Preset selected in the list of available presets.  
(here it's buggy but normally there is the name that you have entered  
in the maker)

C

«Message Required» = Message needed to spawner our  
preset.  
In our case the message «Age1Start» will trigger the  
activation of our spawner and make our preset spawning.

G

«Tags» = Tag of the asset.  
In our case «Age1» the asset will listen to all the mes-  
sages sent with «Age1» or «All» as target  
*NB: only personal tags are important*

# DETAILED FUNCTIONING OF AN AGE

*Age timer*

The screenshot shows the Sandboxed interface with the following configuration for asset ID 2:

- Components:** Age
- Health:** Health slider at 50, Reset button.
- Death Event:** A: Reset, B: Death Delay set to 2.
- Death Delay:** C: Instant death message set to Age1InProgress, D: Life Bar Display set to Hidden.
- Invincible:** Invincible toggle set to False.
- Message sent:** E: Message sent set to Age1End, F: Send To Tags set to Age1.
- Damaging Blocks:** ADD + button.
- Blocks damage:** 20.
- Healing Blocks:** ADD + button.
- Blocks heal:** 20.
- Add Component:** ADD + button.
- Tags:** Tags dropdown with Age1 selected.

A

«Death Event» = death mode of the asset.  
In our case «Reset» allows the asset to respawn right after being destroyed.

B

«Death Delay» = Time it will take the asset to die.  
In our case «2» means that the asset will die after 2 seconds.

C

«Instant Death Message» = Message that allows the asset to die without receiving attack damage.  
In our case «Age1InProgress».

D

«Life Bar Display» = Is the life bar of the asset displayed when it takes damage/kills.  
In our case «Hidden» This allows not to pollute the player's UI.

E

«Message Sent On Death» = Message sent on the death of the asset (depends on the «Death Delay» parameter), here the message is sent after the 2 second delay.  
In our case «Age1End» this message will trigger the death of the next asset.

F

«Sent To Tag» = Target tag of the «Message Sent On Death» parameter.  
In our case «Age1» the message «Age1InProgress» will be received by all assets with the tag «Age1».

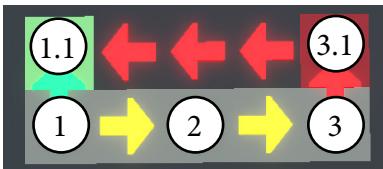

G

«Tags» = Tag of the asset.  
In our case «Age1» the asset will listen to all messages sent with target «Age1» or «All».

A

«Message To Send» = Message to send.  
In our case «Kill» is the default message to kill an asset that has the component «Health». In our case we can customize this message in the parameters of the assets placed in the preset.

B

«Broadcast Type» = Type of message sent.  
In our case «SpecificTagsInRange» it allows to send the message to all the assets having the Tag indicated in «D» and which are carried («C»).

C

«Broadcast Range = Broadcast range in blocks.

D

«Tags» = Target tags of the sent message.  
In our case «A1» all assets that have the tag «A1» in a range of 100 blocks will receive the message «Kill».

E

«Wait Before Broadcast» = Message that triggers the sending of the message.  
In our case «True» we wait for a message before sending «Kill».

F

«Message Required» = Message that we wait before sending our «Kill» message.  
In our case «Age1End» so from the moment this asset will receive the «Kill» message will be sent.

G

«Tags» = Tag of the asset.  
In our case «Age1» the asset will listen to all messages sent with target «Age1» or «All».
